Tan Anni 4:57 PM
@Hamizah @Gary Foo i've shared google slides on Project 4.
I've created some slides to share on the Cost Benefit Analysis section.
I'm still trying to get some data - especially on cost of implementing Wolbachia.
I'm still working on more details of the analysis.

Gary Foo 11:44 PM
thanks @Tan Anni,
going back to the main data science part, the problem statement requires us to predict when and where only. There is no need to predict what is the peak number. So we need to be clear on this. This is about predicting the time, and the location.

On the Time
I've somewhat determined that dengue trends lag temperature trends by 12 weeks and lag rainfall trend by 18 weeks.

Nur Hamizah 8:13 PM
what dataset did we used? I wanna put in the readme.

Gary Foo 8:14 PM
dengue count,
meteorological data
outbreak.sg

let me give u the link
